-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

1. Information Disclosure Statement filed on 10/27/03 has been received.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-13 rejected under 35 U.S.C. 103(a) as being unpatentable over Figure 12 in view of Schisler et al (U. S. Patent no. 5,205,546).

The admitted prior art of figure 12 discloses all the limitations of the claim except for the lock mechanism to secure the diaphragm.

Schisler et al teaches a rotational lock mechanism to secure a diaphragm in a fluid mount (see figures 4 and 5 threaded retaining plate 94, diaphragm 88). Note, threads are projections.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use a rotational lock mechanism as taught by Schisler et al in the device of Figure 12 in order to ease assembly. Using a rotational mechanism also increases the durability since no deformation occurs due to press fitting and it also enables the diaphragm to be replaced.
